

NATIONAL GEOGRAPHIC GLOBAL EXPLORERS

OUR **EXCLUSIVE FAMILY PROGRAM** IN GALÁPAGOS, ALASKA, ANTARCTICA AND BAJA

Developed in conjunction with National Geographic Education, our unique exploration-based program provides an unforgettable ‘smart fun’ experience. Kids and teens may take part in a host of cool activities—from recording wildlife sightings in their Field Notebook to collecting and observing plankton—all adapted for their age, and designed to develop the attitudes, skills and knowledge of an explorer. Guests under 18 (and their families) will:

First and foremost, have fun!

They'll go hiking, swimming, snorkeling, paddleboarding, kayaking, stargazing, even learn to “drive” a Zodiac—all while making new friends and lifelong memories.

Benefit from National Geographic certified field educators

Our naturalists, minted as National Geographic certified field educators, optimize daily learning opportunities and fun for families.

Connect with nature

Whether they're snorkeling with sea lions or searching for whales from the ship's bow, they'll have direct contact with wildlife and wonders above and below the sea.

Learn to be a storyteller

Through photos, videos, writing, drawing and more, kids and teens will think outside the box and use their creativity to tell stories about the unique things they'll do and see along the way.

Develop their observation skills

Daily “In the Field: Spot It!” activities prompt kids to watch for a particular item, like a creature with scales or a bird with black legs, then record their observations in their Field Notebook (pictured at right).

“This program gives them a great opportunity to learn everything about the web of life, the importance of the ocean, the importance of interconnections between organisms, and they're doing all that while having fun!”

— MICHELE M, GUEST ABOARD NATIONAL GEOGRAPHIC ENDEAVOUR II
